

IN THE CLAIMS:

Please amend the claims as indicated below:

1. (Currently Amended) A method for providing an electronic document, said electronic document having multiple versions, each of said versions having a time-stamp, said method comprising the steps of:

5 receiving a request for said electronic document, said request including a variable time-stamp; and

identifying versions of said electronic document corresponding to said variable time-stamp;

61 obtaining two or more of said versions of said electronic documents identified  
10 by said variable time-stamp; and

updating, in response to said request, one or more embedded hyperlinks in  
each of at least two of said two or more obtained versions of said electronic document to  
include a timestamp based on a requested timestamp.

15 2. (Original) The method according to claim 1, wherein an address identifying said electronic document includes said time-stamp.

3. (Previously Presented) The method according to claim 2, wherein said address is a Uniform Resource Locator.

20 4. (Previously Presented) The method according to claim 3, wherein said Uniform Resource Locator as an associated request header for indicating said variable time stamp.

5. (Original) The method according to claim 1, wherein said request is specified using a browser.

25 6. (Original) The method according to claim 1, wherein said request includes a relative time stamp.

7. (Original) The method according to claim 1, wherein said variable time-stamp includes a wildcard character.

5 8. (Original) The method according to claim 1, wherein said variable time-stamp includes a date range.

10 9. (Currently Amended) The method according to claim 1, further comprising the step of displaying a list of the web resources that satisfy said variable time stamp.

10. (Original) The method according to claim 1, wherein said variable time-stamp can be utilized to identify a version of said electronic document having an unknown time.

15 11. (Original) The method according to claim 10, further comprising the step of displaying a list of said versions satisfying said variable time stamp.

12. (Currently Amended) The method according to claim 11, further comprising the step of displaying said a list of links in an order specified by a user.

20

13. (Currently Amended) A system for storing an electronic document having multiple versions, said system comprising:

a memory for storing said multiple versions of said electronic document in an archive of electronic documents; and

25

a processor operatively coupled to said memory, said processor configured to: receive a request for one of said versions of said electronic document, said request including a variable time-stamp; and

identify versions of said electronic document corresponding to said variable time-stamp;

30

obtain two or more of said versions of said electronic documents identified by

said variable time-stamp; and

update, in response to said request, one or more embedded hyperlinks in each  
of at least two of said two or more obtained versions of said electronic document to include a  
timestamp based on a requested timestamp.

5

14. (Original) The system according to claim 13, wherein an address identifying said electronic document includes said time-stamp.

10

15. (Previously Presented) The system according to claim 14, wherein said address is a Uniform Resource Locator.

16. (Previously Presented) The system according to claim 15, wherein said Uniform Resource Locator has an associated request header for indicating said variable time stamp.

15

17. (Original) The system according to claim 13, wherein said request is specified using a browser.

20

18. (Original) The system according to claim 13, wherein said request includes a relative time stamp.

19. (Original) The system according to claim 13, wherein said variable time-stamp includes a wildcard character.

25

20. (Original) The system according to claim 13, wherein said variable time-stamp includes a date range.

30

21. (Currently Amended) The system according to claim 13, wherein said processor is further configured to display a list of the web resources that satisfy said variable time stamp.

22. (Original) The system according to claim 13, wherein said variable time-stamp can be utilized to identify a version of said electronic document having an unknown time.

23. (Original) The system according to claim 22, wherein said processor is  
5 further configured to display a list of said versions satisfying said variable time stamp.

24. (Currently Amended) The system according to claim 23, wherein said processor is further configured to display ~~said~~ a list of links in an order specified by a user.

10 25. (Currently Amended) An article of manufacture for accessing an electronic document, said article of manufacture comprising:

a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising program code means for causing a computer to:

15 receive a request for one of said versions of said electronic document, said request including a variable time-stamp; and

identify versions of said electronic document corresponding to said variable time-stamp;

20 obtain two or more of said versions of said electronic documents identified by said variable time-stamp; and

update, in response to said request, one or more embedded hyperlinks in each of at least two of said two or more obtained versions of said electronic document to include a timestamp based on a requested timestamp.
